

A STATEMENT BY EUDOXUS PRESS,LLC

Eudoxus press,LLC was formed by the insisted demand of international authors and readership,established by the need to provide them an inexpensive forum of free expression of their math. ideas.Page charges,fees and subscription prices are the lowest or of the lowest in the international market and the cheapest for what we offer.These rates were recommended by many research mathematicians in various conferences around the world in recent years with whom we held interesting and important conversations so we put world's input into implementing our plans.The collected funds are just barely enough to cover our high publication costs and cover the other outstanding expenses to run our company.

Also we keep subscription costs at the lowest level so more libraries and individuals buy our products therefore available to more people.

We urge Associate Editors of JoCAAA,JCAAM,JAFa and authors to try to make their libraries subscribe to the journals,as well themselves,so to support our cause,that is to be at the service of the mathematical community.

Since 1990 the trend is exponential increase in the number articles,and negative exponential decrease in the number libraries subscribing worldwide,due to lack of funds and big increase in the subscription rates by the major publishing companies and of course many good articles are produced.

That is the mathematical community has to deal with this contradictory and hurting situation.

We feel that we fill a gap and we help the community.
Kindly we ask for your understanding,help,participation and cooperation.
