Abstract

Unicorns are venture-backed startups with a valuation of more than Rs. 100 crores. The Indian companies started entering the Unicorn domain in 2010, but 101 out of 104 companies entered into the prestigious unicorn group in ten years, from 2013 to 2022. Consider the mentioned factor in count the present study's analyses of the positions of the unicorns in the period from 2013 to 2022. The study explores the number of years taken by the companies to become a unicorns, industry-wise difference in becoming a unicorns, the percentage of valuation captured by individual unicorns in 2022, year-wise valuation and share achieved by the unicorns in 2022, year ranges for unicorns and valuation, founding year and valuation of unicorns. Secondary data is used to conduct the total study. The data released by Startup Talky, a leading organization in sharing news and events on the startup ecosystem, is used for the purpose. The study reveals that the average number of years to accomplish the status of unicorn is eight years, the maximum startups that reached the unicorn status in the 10 years starting from 2013 to 2022 belong to E-Commerce industry with 24 startups, maximum 46 startups joined in the unicorn club in 2021, the startups that entered the unicorn club in the period 2013-2022 has the maximum share (49.6%) in the total valuation of the unicorns.

Keywords: Unicorn, valuation, founding year, unicorn entry year, startups, venture capital

A. Introduction:

According to Lee (2013), "Unicorns" is a venture-backed startup with a valuation of more than \$1 billion, Predominantly in the technology industry. Privately owned startups in India have a greater chance

of becoming a unicorn. This is because the company's valuation grows when it receives funding from established investors. However, Kapoor (2022) explained it as —"Unicorns are privately held, venture-capital backed startups that have reached a value of \$1 billion. The valuation of unicorns is not expressly linked to their current financial performance, but largely based on their growth potential as perceived by investors and venture capitalists who have taken part in various funding rounds". So, combining Lee(2013) and Kapoor (2022), it could be inferred that, The unicorns are venture-backed startups with a valuation of more than \$1 billion, and the valuation is based on the venture capitalists.

Based on data, Tomar(2023) asserts that India currently boasts the third-largest start-up ecosystem globally, behind China and the United States. Citing the "India Tech Trends" survey, Tomar(2023) stated that the total value of Indian unicorns will rise from US \$103 billion in 2015 to \$535 billion in 2022. According to the same report, India's unicorn development story is envisioned positively, with predictions that the nation's unicorn population will rise to 250 by 2025. Mobikwik was the first company to reach unicorn status in India in 2011. After 2016, when increased digitalization allowed more than 50% of Indian enterprises to achieve unicorn status within five years of their establishment, there was a significant uptick in the start-up environment. There were 11 unicorns in India when the count started, but by 2022, there were 100 unicorns, a significant rise. As of 07th September 2022, India is home to 107 unicorns with a total valuation of \$ 340.79 Bn. There are 107 unicorns in India, worth a combined \$340.79 billion. Out of the total, 44 unicorns worth \$93.00 billion were born in 2021, while 21 unicorns worth \$26.99 billion were created in 2022^{1,2,3}.

According to Lawrence (2021), the implementation of liberal policies and initiatives for entrepreneurs by the Indian government is gradually demonstrating greater eagerness to improve the GDP rate of development from grassroots levels. Basu(2023) further gave an elaborative view of the initiatives for entrepreneurs. According to Basu, mainly Startup India, Make in India, Atal Innovation Mission, Support to Training and Employment Program for Women(STEP), Jan

Dhan Aadhar Mobile (JAM), Digital India, Biotechnology Industry Research Assistance Council (BIRAC), Department of Science and Technology (DST), Stand-Up India, Trade related Entrepreneurship Assistance and Development (TREAD), Pradhan Mantri Kaushal Vikas Yojana (PMKVY), National Skill Development Mission, Science for Equity Empowerment and Development (SEED) played a significant role in building a conducive entrepreneurial atmosphere in India.

On analysis, it is revealed that Indian unicorns came into existence from 2010(mainly) and a total of 105 unicorns from 2010 to 2022. However, in this period, living the three unicorns that got their unicorn status from 2010-12, the rest of the unicorns came into existence in the last decade from still 2013 until the present. Considering the information, the present study captures the period of unicorn entry from 2013 (Last decade). In total, 105 unicorns, including all sectors like the IT sector, Education sector, Tourism sector, E-commerce, etc. BYJU'S was founded in the year 2011 and became a unicorn in 2018, registering a profit of \$6 Million, and the current valuation estimated to be \$22 Billion. Second was Eruditus, founded in the year 2010 and became a unicorn in 2021, registering the highest profit of \$242 Million in 2021 and these both company from the Edtech industry¹.

Considering the above discussion, it is mention-worthy that the concept of unicorn in India got good focus when the numbers become significant in Indian incorporation. Further, for the Indian incorporation scenario, it could be interpreted that after 2014, there was a steep rise in the number of unicorns. Till 2013, the numbers could be counted in hands. However, after 2013, there is significant growth in the numbers. The growth also triggered the focus of their search community. Following the line of the unicorn status in India, the present research focus on the analysis based exploration of the unicorns' positions in India. The present researches analysis is mainly based on the establishment year, unicorn status achievement year, valuation of the unicorns (based on 2022), and the share of the unicorns based on their valuation in 2022. Following the narrative above the study objectives are fixed as follows:

- 1. To study the time frame the startups took to reach the unicorn position individually and industry-wise.
- 2. To study the comparative valuation of the unicorns in 2022.

The study is divided into four sections. The present Section A is an introduction that is followed

by Section B, which takes the present literature on unicorns. Section B is followed by section C that discusses the research methodology. The Section D captures and further analyzes different data on Indian unicorns in ten years' time, starting from 2013 to 2022. Finally, Section E concludes the present study.

B. Literature Review:

The formation of unicorns from a startup provides a significant boost to the country's economy, especially in strengthening the startup ecosystem. To capture the importance of unicorns, the international research community has researched the unicorns from different angles. The studies carried out by Chrisman et al. (1998); Gompers and Lerner (2001); Chen et al. (2005); Dahl and Reichstein (2007); Hsu (2007); Zimmerman (2016), Calo and Rosenblat (2017), Gornall and Strebulaev(2017), Au-Yong-Oliveira et al., (2018), Barot and Chhaniwal (2018), Kerai(2018), Jinzhi and Carrick (2019), Milam (2019), Burwell and Fleck (2020), Richling (2022) are worthmentioning in this direction. The works focused on different avenues concerning unicorns. The sub-topics mainly focused are- Models of startup growth to unicorns(Chrisman et al., 1998; Dahl & Reichstein, 2007; Hsu, 2007), Factors of start-up growth (Gompers & Lerner, 2001; Adawiyah, 2021), politicians inclination in unicorn (Chen et al., 2005; Jinzhi & Carrick, 2019), capitalists inclination in unicorn (Zimmerman, 2016), cases of unicorn(Calo & Rosenblat, 2017; Barot & Chhaniwal, 2018; Milam, 2019; Richling, 2022), database of unicorns (Gornall & Strebulaev, 2017), and growth of unicorn (Au-Yong-Oliveira et al., 2018; Jinzhi & Carrick, 2019; Burwell & Fleck, 2020; Adawiyah, 2021). So, if the trajectory of the international research on unicorns is checked, it comes out that- the research community's initial work was the growth of the startups(Chrisman et al., 1998; Gompers and Lerner, 2001; Dahl and Reichstein, 2007; Hsu, 2007) as the startups come first and after reaching the limit of \$1 billion, the venture is graduated to unicorn(Kapoor, 2022). However, when the number of unicorns increased, and the investors of unicorns were paid off for the investments, the capitalists and the politicians were inclined to invest in the unicorns. The investment pattern of the capitalist, followed by the politician, was reflected in the literature (Chen et al., 2005; Zimmerman, 2016; Jinzhi & Carrick, 2019). So, an overall ecosystem for the unicorns was shaping up (Burwell & Fleck, 2020). Thus, a significant database of unicorn cases was developed (Gornall & Strebulaev, 2017); Milam, 2019; Richling, 2022). The development of significant numbers of unicorns pushed the existing

unicorns to focus themselves to the next level, i.e., growth to reach the tiers of decacorn or hexacorn (Adawiyah, 2021). The endeavor to move to higher tiers led the researchers to focus on the topic of- the growth of unicorns (Au-Yong-Oliveira et al., 2018; Jinzhi & Carrick, 2019; Burwell & Fleck, 2020).

Focusing on the Indian unicorns, though there were many startups, the startups achieved the status of unicorns after 2010. Thus the unicorn ecosystem in India started taking shape after 2010, and if considered till 2022, then 2018-2022 saw the maximum conversions of unicorns¹. The late conversion impacted the Indian research community, and the research on Indian unicorns could be seen after the conversions started. The research works of Kerai (2017), Bala Subrahmanya(2017), Vats (2018), Patil and Wadajkar (2021), Abidi (2021), Gupta (2021), Lawrence (2021), Gupta and Purohit (2021), Basu(2022), Maradi(2023), Chauhan and Sahni (2023), Tomar (2023), and Basu(2023) are mention worthy in the direction. Indian authors and researchers also carried out research on business unicorns from different angles. Then it could be said that the topics mainly focused on General information of unicorns (Kerai, 2017), technology for entrepreneurial eco-system and policy development (Bala Subrahmanya, 2017; Patil and Wadajkar, 2021), case studies of unicorns (Vats ,2018; Patil & Wadajkar,2021), information study on Indian unicorns (Abidi, 2021), growth, recent trends and future predictions of Indian unicorns (Gupta & Purohit, 2021; Gupta, 2021), data of Indian unicorns and objectives (Lawrence, 2021), digital transformation and Indian unicorns (Basu, 2022), defining studies for unicorn start-up(Chauhan & Sahni, 2023), critical analysis of Indian unicorns (Maradi, 2023), gaps and opportunities for Indian start-ups (Basu, 2023), unicorns and covid-19 (Tomar, 2023). Two reports, Business Standard (2021) and the Startup India National Report (2022), contributed significantly to the studies. Considering the discussion topics, the study flow of unicorns in India took a specific route. Following the study above on unicorns it could be said that the maximum numbers of unicorns came in the period between the years 2018-2022, and also the maximum researches on Indian unicorns almost overlapped the period (in present case, the research are between 2017-2023).

Delving more profoundly in the research above, it could be placed that the initial research mentioned the contribution of Indian unicorns was by Kerai (2017). However, Kerai's research was from an international perspective with a good mention of India. The author focused on the

significant contribution of the USA, followed by Asia, notably China and India. Technology development for entrepreneurial eco-system and policy development took center stage in the research of Bala Subrahmanya (2017) and Patil and Wadajkar (2021). As mentioned by Bala Subrahmanya(2017) and Patil and Wadajkar(2021), the growing importance of technology and entrepreneur ecosystem is gaining importance among policymakers and researchers working in entrepreneurship and business development for economic growth. Focusing on the policymakers, Lawrence's (2021) and Basu's (2023)'s research was on the governmental policymakers. Lawrence(2021) opined that the implementation of liberal policies and initiatives for entrepreneurs by the Indian government is gradually demonstrating greater eagerness to improve the GDP rate of development from grassroots levels. On the other hand, Basu(2023) focused on the report of the Ministry of Skill Development and Entrepreneurship Development, Government of India (2021). Citing the 2021 report floored in Rajyasabha (Upper house of the Indian parliament)(Srinivas, 2022), the author opined that five sectors- Agriculture; Building, Construction and Real Estate; Retail; Transport and Logistics; and Textile and Clothing have good potential of growth as they account for 69 percent of the total incremental human resource requirement⁴. The growth can account for the addition of more startups and unicorns in the long run. Moving from potentiality to actuality, cases of successful Indian unicorns were placed by Vats (2018) and Patil and Wadajkar (2021) in their studies. Vats(2018) studied Mobikwik. Further, good information studies of the Indian unicorns were carried out by Abidi (2021). In the study, the topic of Indian business unicorns, mainly fintech firms, came up, but the author also discussed Venture Intelligence. The Venture Intelligence database records 37 business unicorns in India, of which six belong to the fintech vertical. Further growth, recent trends and future predictions of the unicorns took center stage in the studies carried out by Gupta and Purohit (2021) and Gupta (2021). Gupta (2021), based on the current success, predicted that 2025, India will have 150 unicorns. Predictions were further reflected in the study carried out by Basu(2022). Expressing deep satisfaction with the good performance of the Indian unicorns during the COVID-19 time, the author took the example of Byju's continuous growth. The author predicted that by 2021, Byju will touch 18 USD businesses. The good performance of the Indian unicorns, especially in the e-commerce sector got a significant focus from Maradi(2023). In the words of Maradi, it could be said that "The e-commerce sector has the lion's share of India's unicorns with 23 startups achieving this status as of May 2022". The significant success was further explored by Tomar(2023). Tomar(2023) asserts that India currently boasts the third-largest startup

ecosystem globally, behind China and the United States(USA). Citing the "India Tech Trends" survey, Tomar(2023) stated that the total value of Indian unicorns will rise from US\$ 103 billion in 2015 to \$535 billion in 2022.

Based on the discussion above, it could be said that the researchers who researched Indian unicorns captured various avenues. However, there are a lesser number of studies that have analyzed the Indian unicorns from the dimension of establishment year, gap of establishment year and unicorn attainment year, industry-wise unicorns, period to become unicorns, valuations of the Indian unicorns, and market share captured by individual unicorns. The present study analyzes and further explains the position of Indian unicorns based on the factors above.

C. Methodology

The present study investigates the position of unicorns from different angles. Concerning the Indian unicorns, the avenues of establishment year, establishment year as unicorns, industry-wise unicorns, time period to become unicorns, valuations of the Indian unicorns, and market share captured by individual unicorns are captured in the present study from 2013 to 2022.

The study is entirely based on secondary data. It uses data released by reports on unicorns, especially Startup Talky's on Indian unicorns from 2013-2022 is used for the purpose. The data sources were further converted into various tables, i.e., a tabular approach was used to carry out the research.

The literature study floors the fact that the study of unicorns, in the Indian context, took momentum between the years 2018-2022 when most of the Indian startups were converted to unicorns. So, there was an ardent need to figure out the time the startups took in their conversion period through tables. The tables described the years taken to become unicorns for startups, and industry-wise unicorn conversion. Significantly in the literature, the growth factor of the unicorns was also emphasized. Keeping pace with the growth factor, the dimension of the valuation of unicorns is further added to the tables. Through the tables, it was scratched out that the time taken by the startups to becoming unicorns and the valuation level achieved by the startups. In a nutshell, the two main variables used in the study are the conversion time of the startups and the Unicorn valuation (in 2022).

Simple descriptive statistics are used to back up the tables based on literature and get the input values for the table. The process is described below.

- 1. Mean Deviation is used to capture the deviation (in years) of the unicorns from the average time taken to become unicorns.
- 2. Mean and standard deviation are used to get an overview of the industry position, i.e., industry-wise average years taken for conversion and deviation.
- 3. Percentage calculation was carried out to get the percentage of startups converting to startups and their valuation.
- 4. Following point 3, the same percentage calculation was carried out to get that-considering the ten-year range and single year, the percentage of valuation achieved by organizations in each ten-year block and a single year.

D. Data Analysis and Discussion

The present section discusses the reports released by Startup Talky on Indian unicorns starting from 2013-2022. Startup Talky is India's leading organization sharing news and events on startup ecosystem⁵. As discussed in section C, all the startups that became unicorns in the ten-year period between 2013 and 2022, are considered in the study. If further analyzed the position of all the Indian Unicorns till 2022, it could be said that the total numbers of Unicorns from 1984 to 2022 are 104. However, among the 104 unicorns, 101 achieved the status of unicorn in the present ten years of study period (i.e, 2013-2022)¹. If further delved deeper into the data of national as well as the international arena, then 2020 to 2022 saw the maximum upsurge of COVID-19⁶. In these three years, if counted, a total of 78 startups among 101 (77.2%), that are considered in the present study were crowned by the status of Unicorn¹. However, the present study is different from the measuring ground of the relation between Unicorns and COVID-19.

i. Discussion on Unicorn Founding Year, Entry Year, Year to Reach and Valuation as on 2022

Table 1 first takes into account, all the startups, that achieved the status of unicorn within the period 2013 to 2022, and subsequent checks the number of years taken by the unicorns to attain the status. Table 2 places the fact that the average number of years to accomplish the status of unicorn is 8 years. In the list, Five Star Business Finance, incepted in 1984, took the maximum

Analysis, Pine Labs, Billdesk, and Gupshup are the startups that took more than 15 years to reach the status of Unicorn. However, if checked from the side of least time taken, Mensa and Global Bees graduated to the position of Unicorn in their first year of business establishment. Further, extending the list Glance and Paytm Mall took one year, while Udaan and Ola Electric took two years to achieve the status. In terms of valuation, Byjus, the Edtech company, tops the list of highest valuation in 2022 with a 2200 crore valuation. The other unicorns that had a valuation of 1000 crore more than that are Paytm (1600 cr), Swiggy (1070 cr), and Polygon (1000 cr).

Table1: Indian Unicorn Founding Year, Entry Year, and Years to become unicorn as on 2022

| Startup Name | Industry | Founding Year | Unicorn Entry Year | Time Taken to become Unicorn(Yr) | Deviatio n from Avg year.(yr) |
|----------------------|-------------------------------|------------------|-----------------------|--|--|

ii. Industry wise Discussion on Unicorns Average time taken and Standard Deviation as on 2022.

Table 2 examines the sector-wise status of the Unicorns. The analysis reveals that the startups that reached the unicorn status in the 10-years period starting from 2013 to 2022, maximum belong to E-Commerce industry with 24 startups. The E-Commerce industry is followed by the Fintech and Financial Services industry with 20 startups and Saas with 12 Startups. Considering the minimum contribution list, renewable energy, media and advertisement, and mobile technology have the minimum contribution for one startup each. However, the industries like- Real Estate, Home Services and Hospitality, Social Media & News, food tech, Cryptocurrency, and Automotive have low contributions to the above-discussed list, with two startups. Considering the Industry-wise average- Media & Advertisement (14 yrs), Software & Technology (11 years), and Saas (11 years) industry-based startups took maximum period to establish them as unicorn. On the other hand, the startups from Mobile Technology (1 year), Automotive (4 years), Cryptocurrecy (4 years), and Marketing (4 years) took a minimum number of years for the mentioned establishment. However, examined in terms of Standard Deviation on the number of years taken to become a Unicorn, the startups of Fintech and financial Services Industry have the maximum deviation of eight years, followed by Esports and Gaming with seven years. On exploring the significant deviation in the Fintech & Financial Services Industry, it is revealed that on the higher side-Five Star Business Finance (37Years), Pinelabs (22years), and

Billdesk(18 years) took more than 15 years for their establishment. Exploring the startups that took a lower number of years for their establishment are- Mensa (0 Years), BharatPe (3 years), and CRED(3 Years). Finally, the high difference between the startups to be established as unicorns in the Fintech & Financial Services Industry (i.e., 0 to 37 Years) resulted in a high Standard Deviation (SD) in the industry. In the same way, MPL (3 years) and Games 24X7 (16 years) resulted in high standard deviation of seven years for the Esports and Gaming industry. Considering the lower Standard Deviation, Home Services and Hospitality, Real Estate, Logistics and Transportation, and Cryptocurrency industries have the lowest SD with one year. Further, Logistics and Transportation has three startups in these iindustries, and others two.

iii. Year wise valuation and percentage share on valuation of unicorns (base year 2022)

The main focus point of Table 3 is to explore the number of startups that were converted to unicorns in different years. Further, the valuation of the unicorns and the percentage of wealth held by the unicorns are discussed. The table reveals that a maximum of 46 startups joined in the unicorn club in 2021, followed by 19 and 14 in the years 2022 and 2020. It indicates that 45.5 percent of the unicorns in the study period (i.e., 2013 to 2022) entered the unicorn club in 2021, followed by 18.8 percent and 13.9 percent in the years 2022 and 2020. So, from 2013 to 2019, 21.8 percent joined the club. If checked in terms of the valuation of the unicorns, then it comes up –35.3 percent of the valuation of the unicorns (that was taken in the year 2022) was controlled by the startups that got unicorn status in 2022. The percentage of valuation share was followed by the startups that entered the unicorn clubs in 2020, 2018, and 2019. They captured 18%, 16.9%, and 10.5% of the total valuation percentage of all the unicorns of 2022. However, surprisingly, the year 2022 earmarked 19 unicorns (percentage of startup to unicorn entry 18.8%), captured only 7.5% of the total unicorn valuation in 2022. Leaving apart the years 2018-2021, the rest of the years captured the 2022s valuation percentage of 19.2%.

Table3: Indian Unicorn Entry Year, valuation, and valuation based percentage share in 2022

| Unicorn Entry Year | Number of Startup to Unicorn Entry | Percentage of Startup to Unicorn Entry(%) | Valuation of the Unicorns in 2022(crores) | Valuation based Percentage share in Year 2022(%) |
|-----------------------|---|--|---|--|
| 2022 | 19 | 18.8 | 2467 | 7.5 |
| 2021 | 46 | 45.5 | 11536 | 35.3 |
| 2020 | 14 | 13.9 | 5900 | 18.0 |
| 2019 | 9 | 8.9 | 3449 | 10.5 |
| 2018 | 8 | 7.9 | 5542 | 16.9 |
| 2017 | 1 | 1.0 | 800 | 2.4 |
| 2015 | 3 | 3.0 | 2870 | 8.8 |
| 2013 | 1 | 1.0 | 150 | 0.5 |
| | Total | 100 | 32714 | 100 |

Source: Author's estimation based on the data of https://startuptalky.com/top-unicorn-startups-india/ (retrieved on 04.04.2023)

iv. Finding year range of the unicorns, total valuation and share of valuation as on 2022

Table 4 is the concise version of Table 3, where the years are compressed into periods of 10 years. The table helps in interpret how many startups joined the unicorn club in the periods 1983-1992, 1993-2002, 2003-2012, and 2013-2022. The periods reveal an interesting fact that there is a steep rise in the number of startups entering the unicorn group from the earlier to the later periods. As an impact, the 1983-1992, 1993-2002, 2003-2012, 2013-2022 saw the inclusion of 1,3, 39, and 58 startups in the unicorn club. However, if counted in terms of shares then the startups that entered the unicorn club in the period 2013-2022 have the maximum share(49.6%) in the total valuation of the unicorns, followed by the period of 2003-12.

Table 4: Indian Unicorns on Founding Year Range, valuation and share of valuation in 2022

| Founding Year | Number of companies entering Unicorn | Total Valuation in 2022(Cr.Rs) | Share on total valuation in 2022(%) |
|---------------|--------------------------------------|--------------------------------|-------------------------------------|
| 1983-1992 | 1 | 140 | 0.43 |
| 1993-2002 | 3 | 1070 | 3.27 |
| 2003-2012 | 39 | 15290 | 46.74 |
| 2013-2022 | 58 | 16213 | 49.56 |

| Total 101 32713 | 100 |
|-----------------|-----|
|-----------------|-----|

v. Founding year of the unicorns, total valuation and share of valuation as on 2022

The founding Year of the unicorns is considered in Table 5. The table is about in which year how many unicorns were established, their valuation in the year 2022, and the valuation of their shares in the period 2022. The table indicates that in only one year, i.e., 2015 more than ten unicorns were incepted. Otherwise ten unicorns were established in 2011, and 9 were established in 2010, 2014, and 2016. However, considering the share based on valuation in 2022, in 2022 maximum share based on valuation is captured by the companies incepted in 2015(16.2%), followed by 14.9%, 13.2%, and 10.3% by the startups established in 2011,2010, 2014 respectively.

Table5: Indian Unicorns on Founding Year, valuation and share of valuation in 2022

| Founding Year | Number of companies entering Unicorn | Total Valuation in 2022(Cr.Rs) | Share on total valuation in 2022(%) |
|---------------|--------------------------------------|--------------------------------|-------------------------------------|
| 1984 | 1 | 140 | 0.4 |
| 1998 | 1 | 500 | 1.5 |
| 2000 | 2 | 570 | 1.7 |

vi. Founding and entry year of the unicorns, total valuation and share of valuation on 2022

Table 6 checks the status of all the unicorns and the share they capture, based on valuation, in 2022. In the list, the maximum of the market share is captured by Byju with 6.7 percent. Apart, from Byju's, the other four companies that come within the top five are- Paytm, Swiggy, Matic Network/Polygon, and OYO Rooms with market shares of 4.9%, 3.3%, 3.1%, and 2.8%, respectively. In this list, the bottom name is reserved for Paytm Mall.

Table 6: Indian Unicorns Name, Founding Year, Unicorn Entry Year, Valuation and share of valuation in 2022

E. Conclusion

After the covid pandemic of 2020, India has emerged as the fastest-growing large economy. In terms of GDP, it has surpassed the worldwide economic giant United Kingdom to become the fifth largest global economy. At present it is knocking on the doors of Germany, considered to be the 4th largest global economy. However, to maintain the niche position in the international economy and also to be on the growth path, there is a need for equal development of all the industries contributing to the economic growth of the country. However, in the case of India, the story is different. If the growth pattern is tracked regarding the unicorn accomplishment status industry-wise, the industry-wise difference becomes wide open. The data of the present study, considering the last ten years from 2013 to 2022, reveals that the E-Commerce industry is having

maximum contribution in the 101-member elite unicorn club with 24 startups. The E-Commerce industry is followed by Fintech & Financial Services with 20 startups, and the Saas industry with 12 startups. However, industries like- foodtech, Insurance, Logistics and Transportation, Marketing, Social Media and News, Real Estate, Home Services and hospitality, Media, Advertising, and Mobile Technology have very little contribution of 2-3 startups. So, there is a need to frame an action plan which will help the growing and contributing industries to continue their contribution and, at the same time boost the less contributing sectors to contribute more unicorns. The growth will not only contribute to pushing up the GDP but also will be useful in generating more employment and entrepreneurial opportunities.
